

MITIGATING BUSINESS RISK >>

IDENTITY AND SECURITY SOLUTIONS THAT ADDRESS THE FULL THREAT LANDSCAPE

Managing business risk and information security is more complex than ever and the range of potential security risks continues to rise. Businesses are finding themselves open to more global and new forms of attack which are often automated and spread at increasing speed. Not only that, but new regulations increase the need for demonstrating compliance to standards and best practices and there is increasing public sensitivity about data security at the moment. Companies that fail to handle data properly can suffer significant damage to their reputations.

Today, achieving a successful information security environment, combined with the pressure on the Corporate Security Officer's budget, requires an end-to-end approach that provides efficient solutions aligned with the business risk challenges. Atos Origin's capability and experience in delivering and integrating large security projects into complex IT environment such as for nuclear power stations, air traffic control systems and at the Olympic Games. And we can do the same for you.

PROVEN CAPABILITY IN LARGE SCALE SECURITY PROJECTS

Identity and Security Management from Atos Origin integrates security solutions into customers' business and IT service Management to enable controlled business risks, improved operational efficiency and reduced costs.

With a full suite of offerings for business process transformation, technical implementation and managed services, Atos Origin helps companies address their most complex identity and security challenges.

However, the key focus is in two key areas:

- » Identity and Access Management - To ensure consistency, efficiency, effectiveness and completeness of identity management
- » Managed Security Services - Providing outsourced Security management, monitoring, and response services that enables organizations to protect the value of their assets and infrastructure

TRUE END-TO-END VALUE PROPOSITION

Atos Origin's end-to-end approach to Information Security relies on our "Design – Build – Operate" model to address the full threat landscape from people and processes, policies, procedures, technology and operations.

This approach enables clients to:

- » Achieve business-driven governance by automating the enforcement and reporting of business policies and compliance mandates
- » Mitigate risk by restricting access to sensitive data and improving security monitoring
- » Lower costs by managing complexity and automating identity and security management procedures
- » Improve the agility of their business by providing the right people access to the right resources at the right time and by delivering scalable managed security services

A SINGLE PARTNER FOR ALL YOUR SECURITY NEEDS

Atos Origin is able to act as a single partner, addressing business risk issues through assessment, transformation and management of your information and security environment.

"WE ACT AS A SINGLE PARTNER, ADDRESSING BUSINESS RISK ISSUES THROUGH ASSESSMENT, TRANSFORMATION AND MANAGEMENT OF YOUR INFORMATION AND SECURITY ENVIRONMENT."

We also have the ability to deploy fully coordinated worldwide projects through over 400 information security and risk management professionals and a proven track record of executing large multinational security programs in complex IT environments. And finally, Atos Origin also leverages its partnership with leading security technology providers, such as Novell, EMC/RSA and Microsoft to integrate proven technology into security solutions that ensure the appropriate level of security for each customer.

PROVEN ABILITY TO EXECUTE

Securing the Olympic Games 2002 - 2012

Critical to the success of the Olympic Games is protecting and securing the IT infrastructure behind it. For the Beijing 2008 Olympic Games, Atos Origin implemented the latest security monitoring solution to collect and filter more than 12 million IT security events each day in order to detect and mitigate any potential security risk for the Olympic Games IT systems. From these, less than 100 were identified as real issues. All were resolved, so there was no impact at all on the Olympic Games. Atos Origin's IT Security methodology and solutions ensured that there was not a single incident that impacted the Olympic Games.

Identity and Access Management with Philips

Philips has adopted an 'Internet centric' strategy to give employees, business-partners and customers around the globe easy access to its business systems. As part of this program, Atos Origin operates the Identity Management service that provides secure access to Philips business critical infrastructure. This service consists of both Functional and Technical Application Management on a 7X24 base. Atos Origin's active participation in the Philips' IAM program allows for a continuous improvement of the service and functionality provided to the Philips employees and partners.
